Subject: AML Legislative Update - Week of May 13
Date: Friday, May 10, 2019 2:31:23 PM

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Loose Ends...

The end of the legislative session is fast approaching – maybe – and legislators are working to wrap up loose ends. There is still a lot to be decided, including to finalize the operating budget, which is in conference committee right now. There is the crime bill or bills to wrap up, the PFD to settle on, the potential for a spending cap, and a number of other bills that might get through one body or another, to pick up next year.

We've sent [this](#) out to legislators, thanking them for their hard work and calling attention to remaining priorities – school bond debt reimbursement and support for the ferry system. At our board meeting in Juneau this week, we also hosted dinner for legislators with local government experience. We know they understand the impacts that State budget decisions have and we're glad to have had the chance to talk with them directly about the work ahead.

The big unknown will be the Governor's response to the outcomes of the session, in particular in relation to the budget, but also in how the legislature has addressed crime and constitutional amendments. The best that AML can do, right now, is to reinforce the messages that we've articulated throughout:

- Cost-shifting to and cuts that impact local governments don't lead to affordability, predictability and sustainability – we can't balance the State's budget on the backs of municipalities
- Vetoes don't strengthen Alaska – local governments keep Alaska strong
- Let's work on solutions, together – we stand ready to negotiate mutually beneficial solutions

The Governor has done a good job of getting around the state with his messages. It's a good time for local leaders to make public statements – resolutions, op eds, etc – that reinforce the importance of local governments and the trade-offs they face if vetoes occur. I can imagine the Governor will reach out to cities and boroughs for support, and I hope that you'll talk to the Governor's office about the things that are important to you. It's entirely possible to support the Governor in your community, but reference the challenges his decisions might present for others. Similarly, you can convey the negative impact you anticipate, but keep the door open for us to all work together.

Wherever you're coming from, the goal is to stay engaged in Alaska's fiscal policy in the coming years, and AML can help to facilitate that in collaboration with members, State agencies, the Legislature and the Governor's office. We look forward to working with you.

As always, give me a call when you have feedback or concerns, if you have questions about what we're doing or what legislators are working on. Call us when you have a problem or solution. And if you haven't already, plan on attending our [Summer Legislative Conference in Soldotna, August 13-15](#), as we tackle the long list of legislation and issues still to be addressed.

Nils Andreassen
AML Executive Director

AML in the News

[Journal of Commerce op ed](#)

There is nothing scheduled for next week at this time. We are now in the 24-hour rule, allowing bills to be scheduled and heard within 24 hours.

Check the schedule often at <http://w3.legis.state.ak.us/#tab2> .

Link to LIO offices <http://akleg.gov/lios.php> - for addresses and phone numbers.

Offnet:

Juneau - 586-9085 - for all phone numbers originating in Juneau

Anchorage - 563-9085 - for all phone number originating in Anchorage

Other, 1-844-586-9085 - for all phone numbers not originating in Juneau or Anchorage

If you have issues calling in to testify, call 907-465-4648 and they will bridge you in.

Please note that if you are in an "Other" community and your phone number originates in Juneau or Anchorage, the 1-844-586-9085 will not work. You must use the Juneau or Anchorage number.

Click on the button below for a copy of municipal impact statements and resolutions submitted to AML by municipalities across the State - updated 4/19/2019

Homer Spit Erosion Abatement and Repair Project- A joint effort between US ACOE, Alaska DOT and the City of Homer
Pictures provided May 8th, 2019

Past winter storms with high winds, in combination with high tide events, have caused significant erosion damage to the land and parking areas surrounding businesses on the South side of the spit. Dredged materials from the harbor were trucked in and heavy equipment was used to shore up and replace those lost areas. Shown here is the work done around The Sport Shed and Glacier D.

Work continued along the south side, building up access to businesses, re-burying exposed city utilities, and creating a unified embankment. Shown here is the Kachemak Shellfish Growers building.

Dredged materials were also deposited and used along the southern stretches between boardwalks in a temporary abatement effort to protect the Sterling Hwy/Homer Spit Road by replacing eroded materials lost.

Beach Wildrye Planting Guide

Photo: Stoney Wright (AK PMC)

Abandoned sand quarry on Adak Island, revegetated with Beach Wildrye

Beach Wildrye is a native species that is highly adapted for revegetation and erosion control on sandy and/or gravelly coastal areas, river and lake banks, and unstable dune areas.

This guide is intended to give the user ideas and techniques for using Beach Wildrye through a series of flow charts from which actual need and method of use can be determined. If Beach Wildrye has a place in your revegetation plan and you require additional information, please contact the Alaska Plant Materials Center at (907) 745-4469. Alternatively, visit the Plant Materials Center's website, at plants.alaska.gov/.

WHAT'S IN A NAME?

Beach Wildrye is an easily identifiable grass species common throughout coastal and insular Alaska. This species (or subspecies) has been called by a number of common and scientific names. (Klebesadel 1985) listed no less than 12 common names including: dune grass, American dune grass, lyme grass, beach ryegrass, sea lymegrass, Siegle de mer, strand wheat, strand oats, wild wheat, sand-meal grass, dune wildrye, and beach wildrye.

The scientific names applied to this species are nearly as confusing as the common names. Presently, *Leymus mollis* is being used as the scientific name of the species. It has also been called *Elymus mollis*, *Leymus arenarius* and *Elymus arenarius*. *Leymus mollis* is the third scientific name the Plant Materials Center has used since starting to work with Beach Wildrye. To further muddle the issue of nomenclature, species of *Amomophila* are at times confused with Beach Wildrye because of that genus' common name "beach grass".

Photo: Stoney Wright (AK PMC)

FIGURE a.2: Typical stand of Beach Wildrye on a gravel beach.

WHERE DOES IT GROW?

Beach Wildrye is the North American species or variety of the *Elymus arenarius* complex. The range of Beach Wildrye is described as being along the coast of Alaska to Greenland, south to Long Island, New York and central California, along lakes Superior and Michigan, also eastern Siberia to Japan (Hitchcock 1950). Within this range, the species occupies a specific niche, most often on sandy beaches forming belts along the shore (Hulten 1968). This includes sandy beaches along the north shore of Lake Superior (Dore 1980). The species habitat is further defined as being spits, sea beaches, tidal flats, sea cliffs and lakeshores (Welsh 1974). While usually associated with coastal dunes, the species can be found along large land lakes occupying the same relative shoreline areas as in the marine coastal areas (Klebesadel 1985).

FIGURE a.3:
Typical coastal band community of Beach Wildrye

Photos: Stoney Wright (AK PMC)

FIGURE a.4: Rock-based Beach Wildrye community in Prince William Sound

THE FIRST DECISION: DO YOU NEED BEACH WILDRYE?

If you wish to revegetate or control erosion on a coastal site or fore-dune area where drifting sand is a concern, Beach Wildrye may be the preferred species. If a pre-existing stand of Beach Wildrye needs to be recreated, it is the only solution.

When should you use Beach Wildrye?

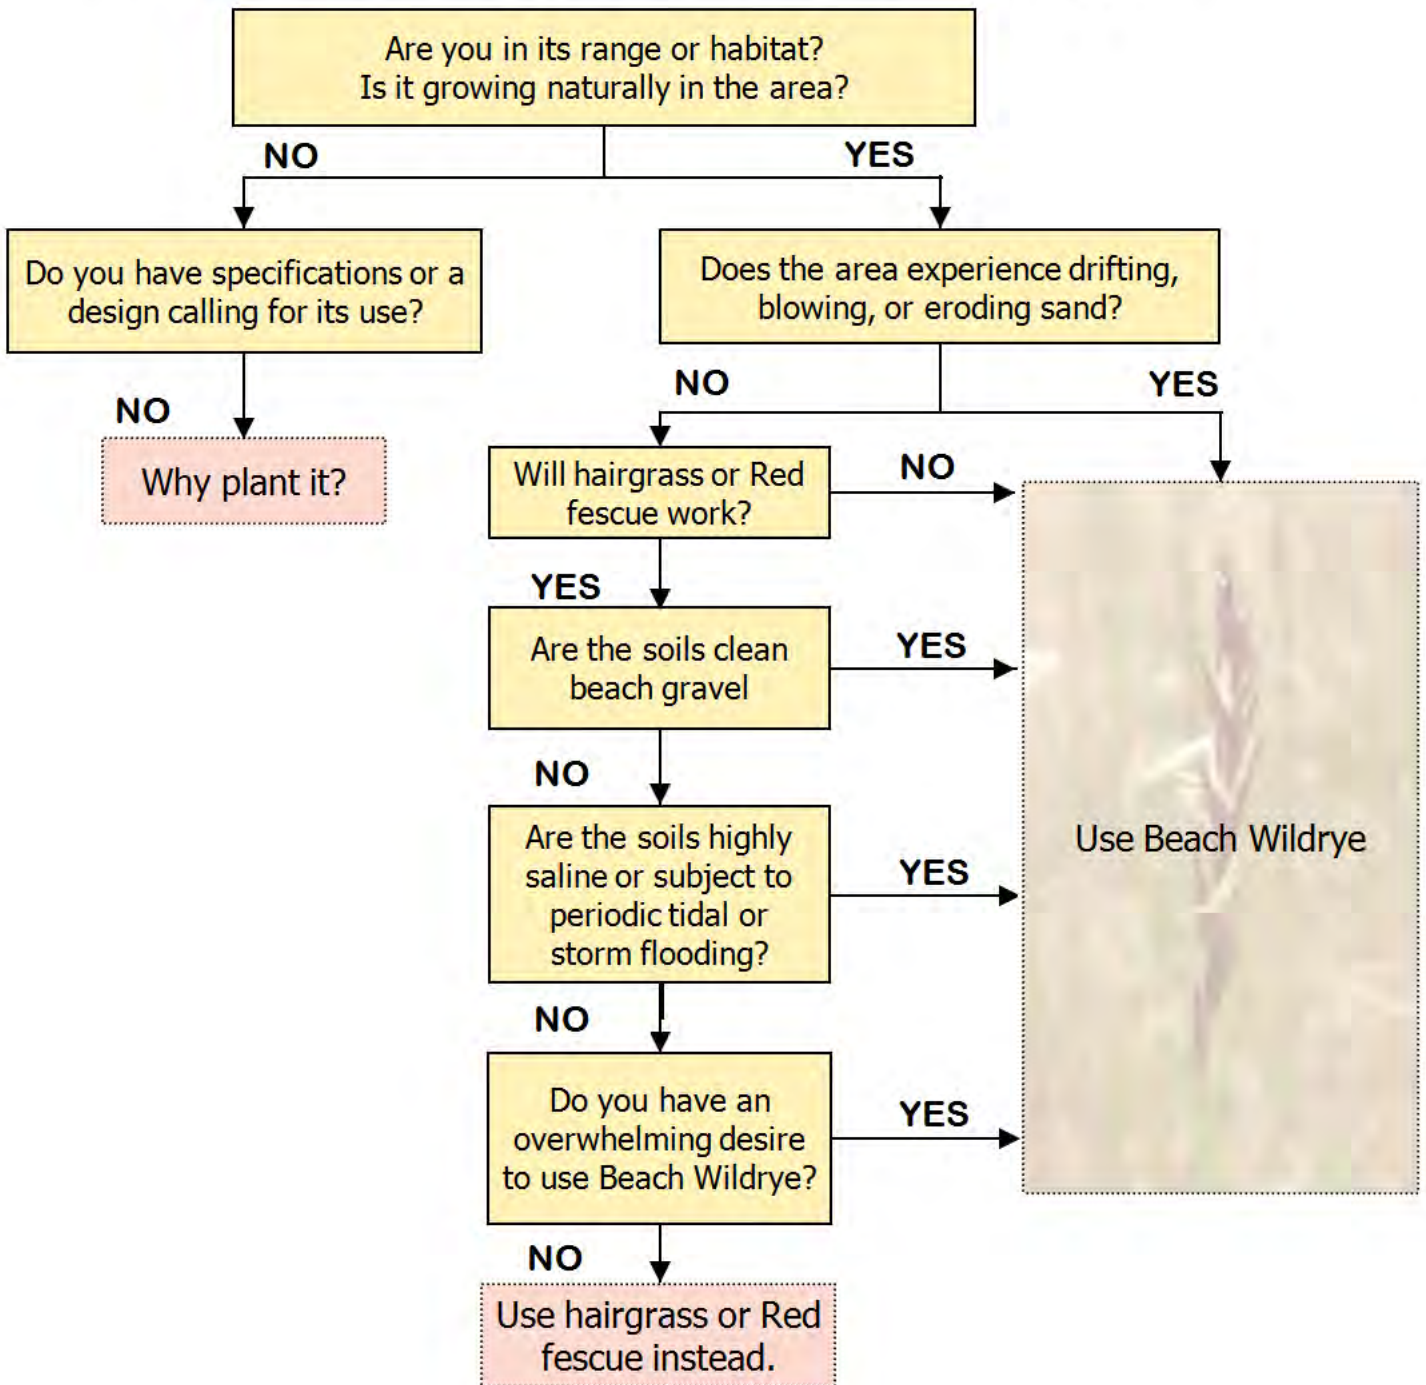

FIGURE a.5: Do you need or want Beach Wildrye?

WHAT TO PLANT: THE SECOND DECISION

Usually when planning a revegetation or erosion control project, seed comes to mind. Beach Wildrye may require a different approach. At the time of this publication's printing, Beach Wildrye seed is not commercially available. However, in 1991, two cultivars of Beach Wildrye were released for commercial production. One was developed for vegetative reproduction or transplanting (sprigging) the other for seed production.

To date, the most common method of using Beach Wildrye has been sprigging. As seed becomes commercially available, more projects will use standard seeding methods.

SEED	vs.	SPRIGS
ADVANTAGES		ADVANTAGES
Reduced cost		Readily available
Low manpower requirements		Can be used on erosive sites
Standard method can be used		High degree of success
		Allows for layout design
		Can tolerate flooding by high tides or storm surges soon after planting
DISADVANTAGES		DISADVANTAGES
Slow growth		Higher manpower requirement
Low vigor		Higher costs
Short supply		
Not adapted for all sites		

Table a.1: Seed/Sprig comparisons

Once it has been determined that Beach Wildrye will be used for a revegetation project, Figure a.6 can guide the process for selecting a planting technique and address additional considerations important for planting the project.

WHAT TO PLANT: THE SECOND DECISION

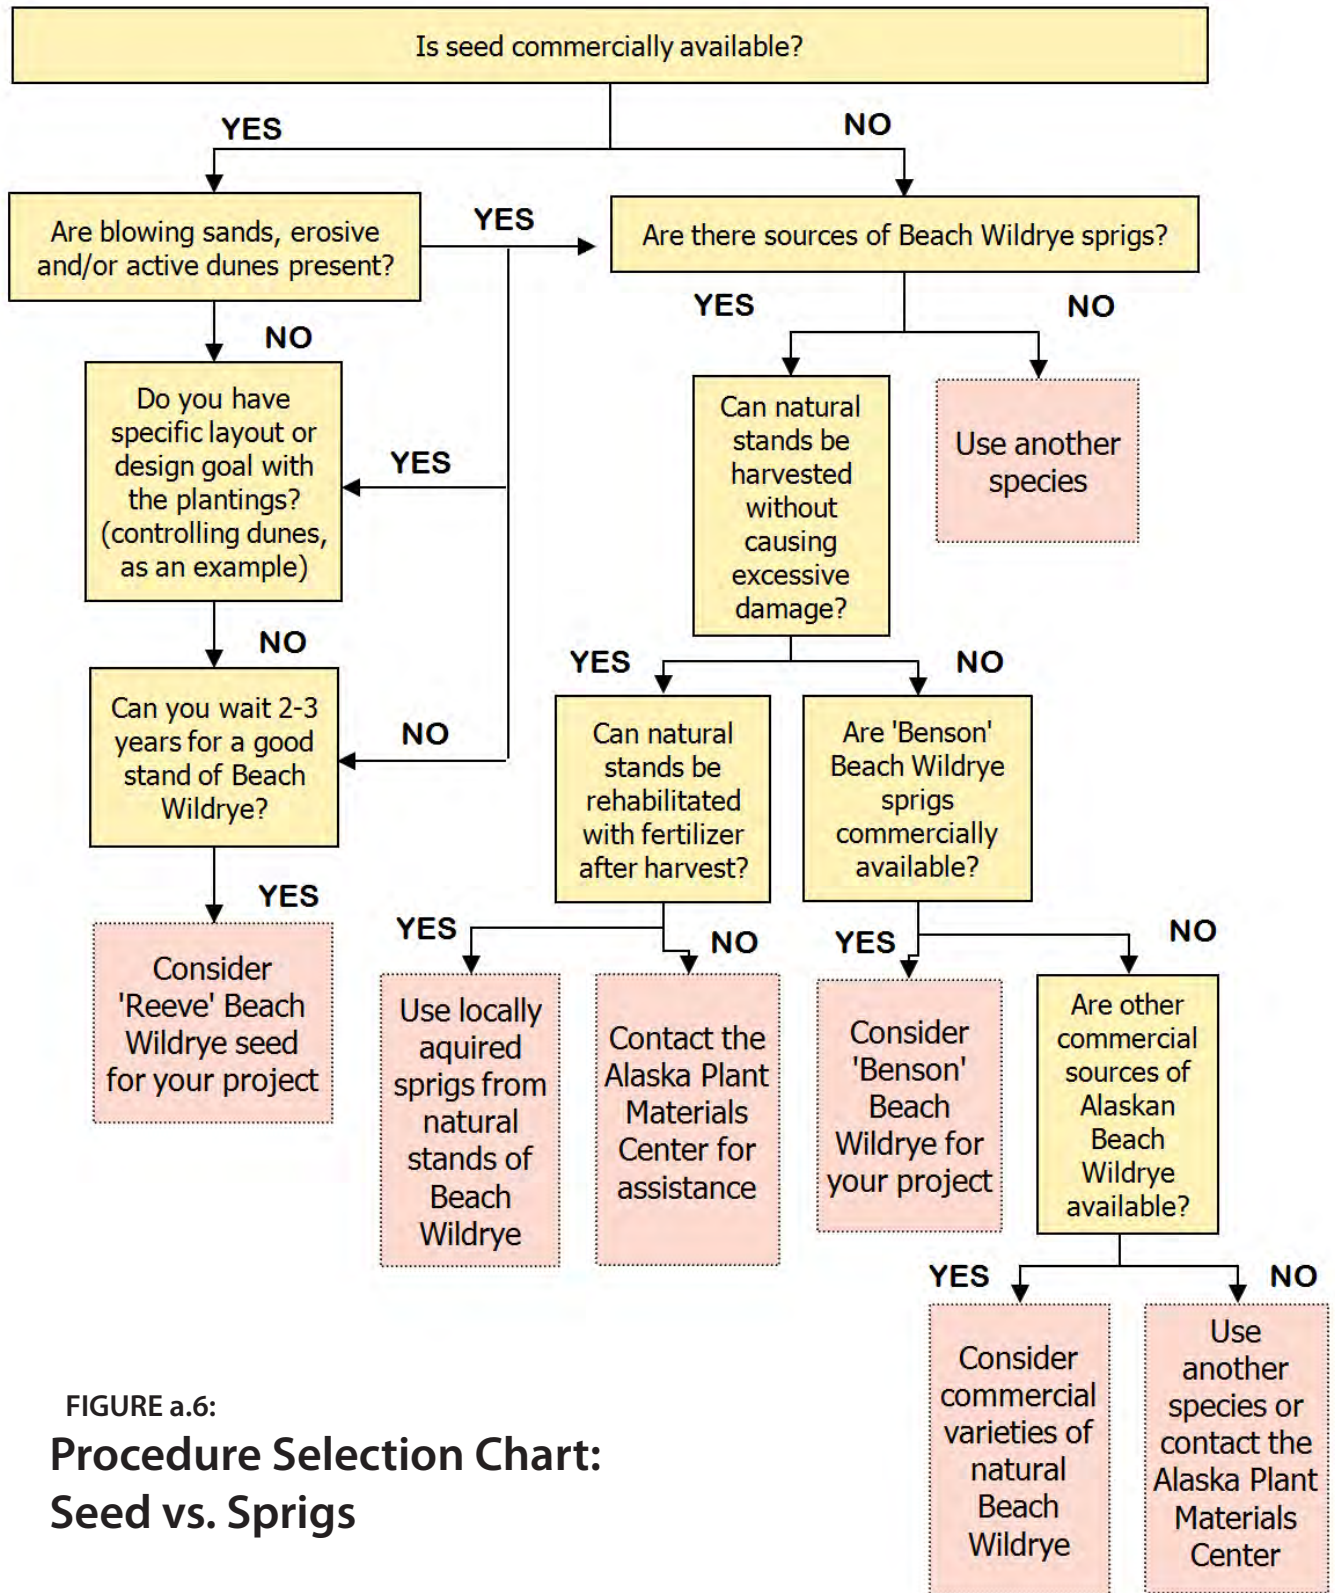

FIGURE a.6:
**Procedure Selection Chart:
 Seed vs. Sprigs**

SPRIGGING: A.K.A. TRANSPLANTING

What is a sprig?

Basically, a sprig of Beach Wildrye is the smallest division taken from a live Beach Wildrye plant that can be used to grow a new plant.

FIGURE a.7: Clump of Beach Wildrye, prior to division

Does the sprig need to have well developed roots attached?

No. A Beach Wildrye sprig will rapidly regenerate new roots.

Does the sprig need to have green leaves?

No. The above ground portion of the sprig may be dormant when transplanted. Also, if the leaves are green when transplanted, they die back after transplanting. This is not reason for concern. New growth will start from the below ground portion.

Is it necessary to trim either the leaves or the below ground portion of a sprig?

No. Simply transplant the entire sprig.

How many times can a clump of Beach Wildrye be divided?

A clump can be divided to a point where only a portion of the below ground crown and above ground leaf mass exists.

SPRIGGING: A.K.A. TRANSPLANTING

Photo: Brennan Veith Low (AK PMC)

FIGURE a.8:
Sprigs of Beach Wildrye, one year after planting at the mouth of the Kenai River

FIGURE a.9: Excavator used to harvest Beach Wildrye

FIGURE a.10: Loader used to harvest sprigs

Photos: Stoney Wright (AK PMC)

HOW ARE SPRIGS HARVESTED?

Several tools can be used to harvest Beach Wildrye sprigs. Shovels are an appropriate tool for harvesting small quantities of sprigs or for harvest in sensitive areas.

When possible, a backhoe, excavator, or front-end loader (Figures a.9 - a.11) provides a very efficient harvesting tool. With this equipment, sod blocks are dug and moved to a site where workers can easily remove sprigs by hand. The vibration and force exerted by the equipment on the sod loosens the soils, usually sand, and allows large undamaged clumps to be removed easily by hand. These are then further divided into individual sprigs for planting.

At the Alaska Plant Materials Center, Beach Wildrye is harvested with a potato digger (Figure a.12). This specialized tool is fragile and is more appropriate for use in the commercial production of Beach Wildrye than for wild harvested plants.

FIGURE a.11:
Loader preparing to lift a natural stand of Beach Wildrye for sprig harvest

Photos: Stoney Wright (AK PMC)

FIGURE a.12: A potato digger used to harvest Beach Wildrye at the Alaska Plant Materials Center

SITE PREPARATION & PLANTING

Planting can be accomplished with shovels or construction equipment. If a shovel or spade is used, simply drive the point four to six inches in the soil. Push the handle forward and slip the sprig into the slit behind the shovel. Note this is done without withdrawing the shovel or spade (Figure a.15).

It is more efficient to use machinery to open trenches, as shown in figures a.13 and a.14.

FIGURE a.13:
Modified dozer blade
with 'tiger teeth'

FIGURE a.14: A site prepared with tiger teeth

FIGURE a.15: Shovel method of planting

PLANTING

The actual planting technique is referred to as the "drop and stomp method". This technique is not described in any landscape or horticulture text, however, the technique has been proven at both Shemya AFB and Adak NAF.

The use of mechanical tree planters (Figure a.18) can be used on production ground with good results. It is unlikely that a contractor will use this type of equipment. Instead, they will rely on standard construction equipment or manual methods.

FIGURES a.16 AND a.17:
Drop (above) & stomp (below) planting method

Photos: Stoney Wright (AK PMC)

FIGURE a.18:
Mechanical tree planters can be used to plant Beach Wildrye

PLANTING

Do the sprigs need to be planted vertically?

No. Beach Wildrye sprigs can be placed in any position and will resume growth, thereby eliminating the need for careful upright planting (Wright 1990a). Negative geotropic growth resumes quickly from inverted seed blocks (Amundsen 1986) indicating haphazard and rough treatment of the sprigs is acceptable. This was verified on Shemya.

When can the sprigs be transplanted?

One major drawback usually pointed out for this species is that the window or time period for successful planting is very limited. Carlson (1991) states "American dunegrass (Beach Wildrye) must be planted when dormant". This point has been dismissed in Alaska. Table a.2 lists various planting times attempted by the Plant Materials Center. High success rates have been reported at all sites from mid May to mid September. This may be in part due to the relatively cool temperatures and cloudy conditions typical of all of the planting sites in Alaska. As a general rule in Alaska, try to complete all transplanting prior to September 1 south of the Arctic Circle, and prior to August 1 north of the Arctic Circle.

LOCATION	PLANTING DATE	SUCCESS RATE after 1 year
Shemya	5/15	98% ¹
Red Dog	6/15	99% ²
Adak	6/23	93% ³
Shemya	7/12	98% ¹
Adak	7/18	99% ³
Port Clarence	7/20	70% ²
Kuparuk	8/16	96% ⁴
Adak	8/17	98% ³
Fish Creek (Anchorage)	8/23	60% ⁵
Adak	9/15	99% ³

¹ Based on 3 replications of 300 sprigs

² Based on 2 replications of 50 sprigs

³ Based on 3 replications of 100 sprigs

⁴ Based on 25 sprigs, no replication

⁵ Based on 50 sprigs, no replication

TABLE a.2.

Percent survival of locally collected Beach Wildrye sprigs related to time of planting (Wright et al 1987, Wright 1980a, 1990b).

Photos: Stoney Wright (AK PMC)

FIGURE a.19: A site on Shemya sprigged in May 1987

FIGURE a.20: Same Shemya site in September 1989

PLANTING

What spacing should be used for transplants?

In general, a 3-4 foot on center spacing is adequate. If the site is subject to severe erosion, 18 inches may be needed.

FIGURE a.21: Typical planting layout

Photos: Stoney Wright (AK PMC)

FIGURE a.22:
A planting site on Adak in
June 1989

FIGURE a.23: The Adak planting site in August 1991

PLANTING

How long will it take to plant an acre?

The time required depends on the spacing between sprigs and how many are planted per acre.

Projects at Shemya, Port Clarence, Kasilof and Adak indicated that 400 sprigs could be dug and prepared per man-hour relatively easily and that 350 sprigs could be planted per man-hour using the drop and stomp method.

What should I expect for survival?

A well planned project planted with reasonable care can be expected to have a sprig survival rate of 90%. Figures a.19 - a.20, and a.22 - a.25 show successful plantings at three sites in Alaska.

Photos: Stoney Wright (AK PMC)

FIGURE a.24:

FIGURE a.25: Same Adak dune area in 1994, 5 years after sprigging

USING SEED TO ESTABLISH BEACH WILDRYE

Beach Wildrye as a species is notorious for not producing seed. The Plant Materials Center has expended a great deal of effort in finding a collection of Beach Wildrye that would produce commercially viable amounts of seed. By 1991 these efforts resulted in the release of 'Reeve' Beach Wildrye, a collection from Norway. This release is classified as *Leymus arenarius*. The demand for seed should be strong if it becomes commercially available, and *Leymus arenarius* can be substituted for *Leymus mollis*.

What is Beach Wildrye seed like?

Beach Wildrye seed is very large when compared to other grasses. There are 33,000 seeds per pound. For comparison, Kentucky bluegrass averages 1,500,000 seeds per pound and Red fescue averages 365,000 seeds per pound.

How is the germination & vigor?

Beach Wildrye is not known for being a species with either high seedling vigor or exceptional germination percentages for its seed. Fifty percent germination for the seed should be considered acceptable.

How about a seeding rate?

Based on the seed size and evaluation of plantings throughout Alaska, a seeding rate of 60 pounds per acre should provide an adequate stand. Remember that this is a large-seeded species, so the rate per acre may appear excessive. It is not.

When should I sow the seed?

In general, use the standard seeding recommendations as presented in Table a.3.

REGION	SOWING DATES
Southwest Alaska	May 1 - September 30
Southeast Alaska	May 1 - September 30
Southcentral Alaska	May 15 - September 1
Western Alaska	June 1 - August 15
Arctic Alaska	July 1 - August 1

TABLE a.3: Standard seeding dates in Alaska

ADDITIONAL FACTS ABOUT BEACH WILDRYE

Beach Wildrye responds to high nitrogen fertilizers. When planting sprigs or seed, rates of 500 to 600 pounds of 20% nitrogen, 20% phosphorus, and 10% potassium fertilizer give good results.

No other soil amendments are necessary.

This species will not tolerate excessive traffic (Wright 1990c). This includes foot traffic. Both natural and artificially established stands can be severely damaged by traffic that causes soil compaction.

Beach Wildrye works best in sandy or gravelly soils. Performance in organic, silt and clay soils tends to be poor.

Planting patterns must be planned. Irregular spacing can result in dunes. Uniform spacing tends to promote uniform sand deposition and therefore uniform build-up of sand.

This species does not tolerate strong competition from other grasses. Avoid using strongly rhizomatous species with Beach Wildrye sprigs. Avoid any other grass when using Beach Wildrye seed. If a grass species is used with Beach Wildrye, use light rates of Hairgrass (*Deschampsia* sp.) (less than ten pounds per acre). Broadleaf material such as Tilesy sagebrush (*Artemisia tilesii*) can be used with either seed or sprigged Beach Wildrye.

A one-acre natural stand can produce enough sprigs to establish a seven-acre site with sprigs on two - to three-foot centers.

Photo: Stoney Wright (AK PMC)

FIGURE a.26: Beach Wildrye roots and rhizomes stabilize sandy soils

COMMERCIAL AVAILABILITY OF SPRIGS & SEED

Two cultivars, 'Reeve' and 'Benson', have been released by the Alaska Plant Materials Center (Wright 1991a, 1991b). Reeve is a seed producing cultivar of *L. arenarius*, while Benson, *L. mollis*, is intended to be sold as sprigs. Presently, availability of both is limited. Contact the Plant Materials Center if you are interested in commercially producing either cultivar. If you are searching for seed for plants to use on projects, contact your local Co-operative Extension Service Office or the Alaska Plant Materials Center.

Figure a.27: Beach Wildrye along the Kenai Peninsula

CLOSING STATEMENT ABOUT USING BEACH WILDRYE & WHERE TO GET MORE INFORMATION

Beach Wildrye is an extremely effective species for use in coastal revegetation, restoration and erosion control. Due to the dynamic nature of most shorelines, prior planning is needed if planting efforts using Beach Wildrye are to succeed. Before undertaking a Beach Wildrye planting program, a call to the Alaska Plant Materials Center may prevent unnecessary surprises, (907) 745-4469.

Photo: Brennan Veith Low (AK PMC)

Figure a.28:

Beach Wildrye is very susceptible to damage by uncontrolled foot traffic. In this photograph, an eroded coastal dune has been used for a fire-pit. Protective fencing and access controls can help limit human causes of erosion.

**ADDITIONAL INSURED – DESIGNATED
PERSON OR ORGANIZATION**

This endorsement modifies insurance provided under the following:

COMMERCIAL GENERAL LIABILITY COVERAGE PART

SCHEDULE

Name Of Additional Insured Person(s) Or Organization(s):

South Peninsula Athletic Recreation Center (SPARC)
500 Sterling Highway
Homer, AK 99603

Information required to complete this Schedule, if not shown above, will be shown in the Declarations.

A. Section II – Who Is An Insured is amended to include as an additional insured the person(s) or organization(s) shown in the Schedule, but only with respect to liability for "bodily injury", "property damage" or "personal and advertising injury" caused, in whole or in part, by your acts or omissions or the acts or omissions of those acting on your behalf:

1. In the performance of your ongoing operations; or
2. In connection with your premises owned by or rented to you.

However:

1. The insurance afforded to such additional insured only applies to the extent permitted by law; and
2. If coverage provided to the additional insured is required by a contract or agreement, the insurance afforded to such additional insured will not be broader than that which you are required by the contract or agreement to provide for such additional insured.

B. With respect to the insurance afforded to these additional insureds, the following is added to **Section III – Limits Of Insurance:**

If coverage provided to the additional insured is required by a contract or agreement, the most we will pay on behalf of the additional insured is the amount of insurance:

1. Required by the contract or agreement; or
2. Available under the applicable Limits of Insurance shown in the Declarations;

whichever is less.

This endorsement shall not increase the applicable Limits of Insurance shown in the Declarations.

Information required to complete this Schedule, if not shown above, will be shown in the Declarations.

A. Section II – Who Is An Insured is amended to include as an additional insured the person(s) or organization(s) shown in the Schedule, but only with respect to liability for "bodily injury", "property damage" or "personal and advertising injury" caused, in whole or in part, by your acts or omissions or the acts or omissions of those acting on your behalf:

1. In the performance of your ongoing operations; or
2. In connection with your premises owned by or rented to you.

However:

1. The insurance afforded to such additional insured only applies to the extent permitted by law; and
2. If coverage provided to the additional insured is required by a contract or agreement, the insurance afforded to such additional insured will not be broader than that which you are required by the contract or agreement to provide for such additional insured.

B. With respect to the insurance afforded to these additional insureds, the following is added to **Section III – Limits Of Insurance:**

If coverage provided to the additional insured is required by a contract or agreement, the most we will pay on behalf of the additional insured is the amount of insurance:

1. Required by the contract or agreement; or
2. Available under the applicable Limits of Insurance shown in the Declarations;

whichever is less.

This endorsement shall not increase the applicable Limits of Insurance shown in the Declarations.
